Windows 10 iso bootable usb mac. Windows 10 iso bootable usb rufus. Windows 10 iso bootable usb not working. Windows 10 iso bootable usb download. Windows 10 iso bootable usb tool. How to make windows 10 iso bootable usb on mac. How to make windows 10 iso bootable usb. Windows 10 iso bootable usb linux.

To create a bootable USB drive for installing Windows 10, the preferred method is of course using the Windows 10 Media Creation Tool. But what if the Media Creation Tool doesn't work for you, or you don't like using it? Don't worry, you can also create a Windows 10 bootable USB drive from an ISO image file without using the Media Creation Tool. This article will show you how to create a Windows 10 bootable USB drive from ISO for installing Windows 10. Make sure you have downloaded a Windows 10 ISO file onto your computer, then follow the methods and steps below.

Way 1: Create Windows 10 bootable USB from ISO using Rufus Rufus is an open-source application for easily creating bootable USB flash drives or Windows To Go live USB drives. Here is how to easily create a Windows 10 bootable USB flash drive from an ISO image using Rufus. 1. Plug a USB flash drive into your computer and back up the data on the USB drive (if any) to another place. 2. Download the Rufus program onto your computer, and then run it directly without installation. 3. On Rufus, set the following options to create a Windows 10 bootable USB flash drive. Select the USB flash drive from the Device drop-down menu. Click the SELECT button to import the Windows 10 ISO file. Select Standard Windows installation from the "image option" dropdown. Leave the other options at their default values and click Start. Click OK and Rufus will start creating the Windows 10 bootable USB flash drive. 4. Just wait for the creation to complete. This usually takes 15 to 30 minutes. 5. When the progress bar goes to 100% and displays Ready, it indicates that Rufus has successfully created a Windows 10 bootable USB drive from the ISO. **Way 2: Create Windows 10 bootable USB from ISO using ShapelISO** iSumsoft ShapelISO is another powerful and yet easy-to-use tool that can help you easily create a Windows 10 bootable USB drive from an ISO image file. Step 1: Download and install iSumsoft ShapelISO on your PC. After installation, launch this tool. Step 2: Select the Burn option, click the file icon to import the Windows 10 ISO file, click the Refresh icon to show your connected USB drive, and then click the Start button. The tool will immediately start burning the Windows 10 ISO file to the USB drive to create a bootable Windows 10 USB drive. Step 3: Wait until the process is complete. When the software page shows that the ISO image has been successfully burned to the USB drive, the Windows 10 bootable USB is created. **Way 3: Create Windows 10 bootable USB from ISO using CMD** If you want to create a Windows 10 bootable USB drive without using any software, the Windows Command Prompt can do it for you. Here is how to create a Windows 10 bootable USB flash drive from an ISO image using Command Prompt. Step 1: Reformat the USB flash drive. 1. Connect the USB flash drive into your computer and back up the data on the USB drive (if any) to another place. 2. Type cmd in your Windows search box. When the Command Prompt app shortcut appears in the search results, click Run as administrator. 3. In the Command Prompt window, type diskpart and press Enter to access the diskpart tool. 4. Type list disk and press Enter to list all disks connected to your computer. Then judge which is your USB flash drive according to the disk size. 5. Type select disk # and press Enter to select your USB flash drive. "#" is the disk number of your USB flash drive. 6. Type clean and press Enter to erase all partitions as well as data on your USB flash drive. 7. Type convert mbr and press Enter to convert the USB flash drive to MBR format. 8. Type create partition primary and press Enter to create a primary partition on the USB flash drive. 9. Type active and press Enter to activate the primary partition on the USB flash drive. 10. Type format quick fs=fat32 label="SWM-USB" and press Enter to quickly format the primary partition as FAT32 and set its volume label as SWM-USB. 11. Type assign letter="X" and press Enter to set the drive letter of the partition to X. 12. Type list volume and press Enter to list all volumes on your PC so that you can view the volume details of your USB drive. 13. Type exit and press Enter to exit the diskpart tool, leave the Command Prompt window there or close it. Step 2: Create Windows 10 bootable USB drive from ISO. 1. Locate the downloaded Windows 10 ISO file and double-click it to mount it to your computer. 2. Windows will automatically assign a DVD drive letter for the mounted ISO image. Write down the DVD drive letter (E: in my case). 3. Go back to the previously Command Prompt window or open a new Command Prompt window as administrator. Then, type robocopy E:\X\ /E /X /f install.wim and press Enter to copy all files except the install.wim file in the mounted Windows 10 ISO image to the root directory of the USB flash drive. Then, wait for the file copy to complete. This takes about three minutes. 4. All files except the install.wim file in the ISO image have been successfully copied to the root directly of the USB flash drive. 5. In this step, you will copy the install.wim file from the ISO image to the USB flash drive. Since the install.wim file is larger than 4GB and the FAT32 formatted USB drive cannot store a single file over 4GB, you need to divide the install.wim file into two install.swm files and save them on the USB flash drive. To do that, type the following dism command and press Enter. Dism /Split-Image /ImageFile:E:\sources\install.wim /SWMFile:K:\sources\install.swm /FileSize:2500 6. A few minutes later, the install.swm files are successfully split from the install.wim file and stored in the sources folder in the USB flash drive. 7. Now go to the USB flash drive, open the sources folder, and you will see two install.swm image files. That's all the steps required to create a Windows 10 bootable USB flash drive from an ISO image using Command Prompt. Then, boot the computer from the USB flash drive and you can install Windows 10 on the computer. **Conclusion:** The above how to create a Windows 10 bootable USB drive from an ISO image file for installing Windows 10. Both Rufus and iSumsoft ShapelISO are good options, they are safe, effective and easy to use. The Command Prompt allows you to successfully create a Windows 10 bootable USB drive from an ISO image without using any software, but the process is cumbersome. You need to make sure you run the correct commands to make the USB drive bootable. If you are not good at using Windows commands, Rufus or iSumsoft ShapelISO is still your best choice. You may also be interested in How to Make External Hard Drive Bootable for Windows 10. Related Articles Here's a look at using the utility called Rufus to create a bootable USB flash drive for Windows 10 which is actually much faster than Microsoft's tool. Usually, when we cover creating bootable USB drives for Windows, we recommend the Windows 7 USB/DVD Download Tool (time to update that name Microsoft). Still, I've had some problems creating one and started looking for a different option. So this time around, I thought I would try the free utility called Rufus. Here's a look at using it, and in the end, I had a faster experience using it than the older Microsoft tool. **Update:** To get the ISO for the official release of Windows 10, head to this Microsoft page and download the 64 or 32-bit version of the media creation tool. It will allow you to upgrade your Windows 7 SP 1 or Windows 8.1 PC or download the ISO to use later for a clean install. Also, make sure to check out our piece on creating a Windows 11 bootable flash drive. For more on that, please read our article: How To Download Windows 10 ISO for a Clean Install. **Create Windows 10 Bootable USB Drive:** First, make sure you download the Windows 10 Technical Preview by joining the Windows Insider Program, as explained in this article. Also, make sure you're using a USB drive at least 4 GB for the 32-bit version and 8 GB for the 64-bit version. One of the first cool things about Rufus is that no installation is necessary, which means you can stick it on a network location or another external drive to run it. When you run it, setting it up is simple. Select the USB drive you want to use, select your partition scheme - it's worth noting that Rufus also supports a bootable UEFI drive. Then select the disc icon next to the ISO drop-down and navigate to the location of your official Windows 10 ISO. After that, click Start, and you should be good to go within minutes. If you want to be extra careful, check the option to check the device for bad blocks. I didn't do that, and my bootable drive turned out fine. In my experience, using the older USB 2.0 port and drive, it took less than five minutes to create the drive. If you use a USB 3.0 or 3.1 device, I would love to know how fast that works. Anyway, after it's created, you can go ahead and install the Windows 10 Technical Preview on a spare computer. Let us know what you think of this tool over Microsoft's Windows 7 USB/DVD Tool; for me, I will continue to use Rufus - at least until Microsoft updates or recreates a new utility - if it does at all. And yes, of course, you can use this to create other versions of Windows or Linux distros from an ISO if you wish. **Featured:** Microsoft, Windows 10 Generally, there are two reasons for you to make bootable Windows 10 USB from ISO file. ■ **Make Windows 10 clean installation:** You can create a bootable USB of Windows 10 via Diskpart and then boot from it to install Windows 10. ■ **Get a portable Windows 10 environment:** It's available to create a Windows 10 To Go disk with a USB drive from ISO, and then you can use the familiar Windows 10 environment even when you are in different places. How to: create Windows 10 bootable USB drive from ISO for two purposes You can choose a proper way to make a bootable USB drive of Windows 10 from ISO based on your specific demand: **PS:** It is supposed that you have downloaded Windows 10 ISO file from Microsoft and mounted the ISO file. ✓ **Create bootable Windows USB from ISO for installing Windows 10 on SSD or HDD from USB drive,** you can make a bootable USB drive from ISO via Diskpart utility. 1. Then, Check out those detailed steps: **Step 1.** Prepare an empty USB whose capacity should not be smaller than 4GB (for Windows 10 32bit) or 8GB (for 64GB). And connect it to your PC. **Step 2.** Press Windows + R, input cmd, and press Enter. **Step 3.** Run these commands: **diskpart** ■ **list disk** ■ **select disk n** (n is the disk number of the USB drive) ■ **clean** ■ **create partition primary** ■ **select partition 1** ■ **format fs=ntfs quick** (if you plan to create UEFI bootable USB of Windows 10, replace "format fs=ntfs quick" with "format fs=fat32 quick" to the USB into FAT32 file system) ■ **active** ■ **assign letter=m** (m is the drive letter that you want to assign to the USB drive) ■ **exit** **Step 4.** go to the boot folder of the Windows 10 ISO files by running the commands listed below: **g:** ■ **cd boot** Note: g is the drive letter of your mount drive as it appears in File Explorer. **Step 5.** Then, run those commands and wait for the process to complete. ■ **bootsect /nt60 N:** ■ **xcopy G:*. * N:\E /F /H** Note: You should replace N and G with the right drive letters for the USB drive and Windows 10 ISO image respectively. ✓ **Make Windows 10 bootable USB drive from ISO for portable Windows environment** If you are running Windows 10 Enterprise/Education/Pro edition, you can use Windows built-in function, Windows To Go to create a Windows 10 bootable USB drive. See the steps given below: **Step 1.** Mount the ISO file and connect a certified USB drive to your Windows 10 computer. **Step 2.** Click Windows button and go to Control Panel > Windows To Go. **Step 3.** In the Create a Windows To Go workspace window, choose the certified USB drive onto which you want to install Windows 10 and click "Next". **Step 4.** Click "Add search location" to search for the Windows 10 installation ISO file and choose the mounted ISO file. **Step 5.** Choose whether to use BitLocker in the USB drive. **Step 6.** Click "Create". **Step 7.** Wait for the process to finish. Click Yes or No to make this computer boot from the new created Windows 10 USB drive. **Notes:** ■ The capacity of the target USB drive should not be less than 32GB. ■ This operation will erase all data on the destination USB drive, thus you should back up the necessary data on it in advance. If you are running Windows 11, Windows 10 Home, Windows 8/8.1 Home/ Pro/Education, or Windows 7 user, you can't enjoy Windows To Go function. If the capacity of the USB drive where you want to put Windows OS, you can't create Windows To Go workplace on such USB drive. Here AOMEI Partition Assistant Standard is highly recommended. It allows you to create Windows bootable USB for a portable environment even when you are using Windows Home Edition. And it only demands a USB drive not less than 13GB. Let's see how it works: **Step 1.** Insert an empty USB drive that is larger than 13GB to your computer and make sure that it can be detected. Install and run AOMEI Partition Assistant Standard. In the main interface, click All Tools and choose Windows To Go Creator. **Step 2.** Choose Create Windows To Go for personal computer. If you want to run Windows from external USB on Mac, you can upgrade to Professional version and choose the second option. **Step 3.** Select Create Windows To Go with system disc/ISO. If it doesn't detect Windows 10 ISO, click the folder icon to select manually. **Step 4.** Choose the USB drive as the target path. **Step 5.** The program prompts you that the data on the USB drive will be erased. If there are important files on it, back up them in advance. **Verdict** After realizing different methods on how to create Windows 10 bootable USB from ISO, you can pick up one based on your specific situation. Then, you can boot from the bootable USB drive to install Windows or enjoy the familiar environment.
